DYK that cold, flu, and immunity supplement sales have skyrocketed since COVID-19? However, consumers should be aware that a supplement's ingredients might not match what's listed on the label. OPSS tested 30 immune-health dietary supplements featured on Amazon to see if the ingredients were accurately labeled. Read what they found: "Analysis of Select Dietary Supplement Products Marketed to Support or Boost the Immune System."

Even though the OPSS "Let's Talk Dietary Supplements" campaign has ended, we encourage you to keep the conversation on supplement safety going. It's especially important now—as we head into winter and immune-health supplements start to trend—to share tools and resources from trusted sources to help keep your loved ones safe.

We're working on an exciting project with one of our partners on this very topic that we can hardly wait to share with you! Stay tuned for more information in the coming months. 😋
ATTENTION: Betel nut, blue lotus, and SR-9011 were added to the DoD Prohibited List on 8 November 2022.

Are you thinking about taking creatine? Read the OPSS article all about creatine supplements.

Creatine Supplements: The Basics

Creatine supplements are popular among athletes and Warfighters trying to enhance their strength and muscle size. Unlike many other supplements, there is considerable evidence that taking creatine supplements might result in greater gains in body mass and strength when combined with resistance training.
